

SECURE ACCESS BROADBAND

SIMPLE, SCALABLE AND SECURE

Enterprises around the globe are turning to digital initiatives to drive business, product, or service innovation in order to maintain relevancy in a hyper competitive environment. These digital initiatives and the pace of change are true challenges creating complexities to keep up with the demands of the business for already strapped IT organizations. You need secure and cost-effective access for your hybrid network strategy to deliver high-performing, public-private connections that efficiently scale. Help your business transform and evolve your network using Level 3SM Secure Access broadband with hybrid connectivity solutions to keep pace with change.

Let us help as your business transforms with cost-effective and secure broadband.

Level 3 provides carrier-agnostic broadband access to our end-to-end hybrid connectivity solutions that deliver a secure, cloud-friendly, scalable user experience. Leverage our team of experts to design, install, manage, and maintain broadband access solutions for you. Simplify network complexities across disparate technologies and shrink administrative overhead.

Improve IT Agility

- Support growing bandwidth demands and increasing number of applications with a range of broadband access speeds and technologies
- Easily augment or replace T1 access with wireline or wireless broadband internet access
- Offload "best effort" traffic from MPLS onto more cost-effective broadband

Drive Efficiencies

- Simplify supplier management and reduce administrative overhead with a single source and invoice for local broadband procurement across the U.S.
- Gain greater coverage and entrance facility diversity with carrier-agnostic, high-availability broadband solutions
- Easily mix access technologies with MPLS to achieve private networking

Maintain Security and Performance

- Utilize secure IPsec tunnels for data encryption
- Easily support cloud applications with secure internet breakout.
- Leverage Level 3 network's deep peering interconnects for optimal routing

Technical Features / Capabilities

We source broadband access options to balance your requirements for cost, SLA, and bandwidth:

- Secure Access Broadband
 - Level 3 provided carrier-agnostic cable, DSL, fiber and cellular access solutions
 - Level 3[®] Managed Router
 - IP Sec tunnel(s) into MPLS/IP VPN for secure data encryption transport
 - Available U.S. nationwide
- Designed and managed end-to-end with Level 3's hybrid connectivity solutions
- Equipment, access, and PoP diversity available
- Experienced project management available
- 24x7 proactive monitoring and management
- Network-based firewall protection available

- Cloud enabled – allows seamless access to SaaS applications and major CSPs
- MyLevel3SM self-service portal access provides circuit utilization, order and service management

Why Choose Level 3

Carrier-agnostic, scalable, and secure broadband

Simple supplier management – single procurement source and invoice

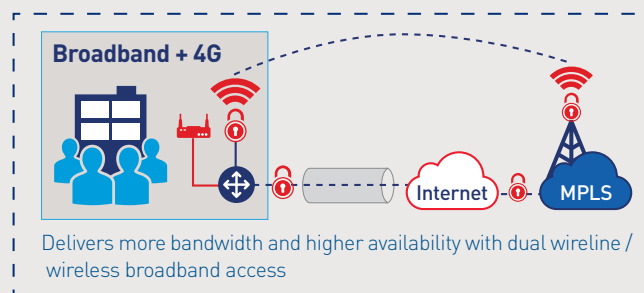

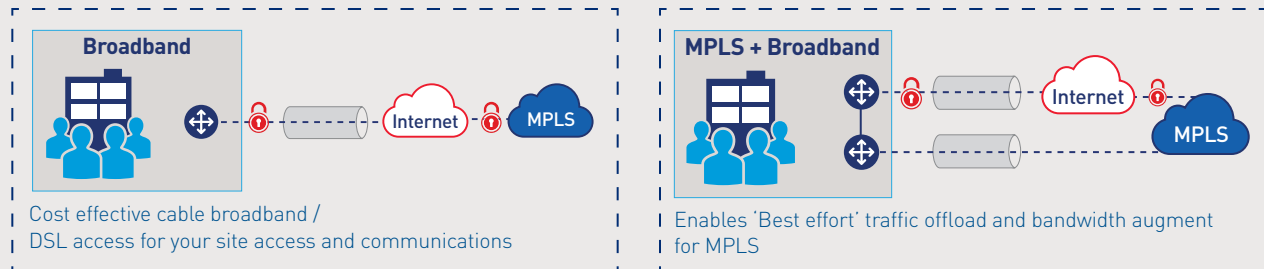

Focus on your business by reducing your administrative overhead

Transform cost-efficiently and transition at your own pace

Proven expertise with thousands of customer locations deployed

We manage entire process for you - providing best solution available

Level 3SM Secure Access Broadband with Level 3's Hybrid Connectivity Solutions:

ABOUT LEVEL 3

We operate and take end-to-end responsibility for network solutions that connect you to the world. We put customers first and take ownership of reliability and security across our broad portfolio.
