

LEVEL 3SM PROFESSIONAL SECURITY SERVICES

LEVEL 3SM SECURITY RISK ASSESSMENTS

The headlines say it all. The topic of network breaches and hacker groups make the news on a regular basis. The ever-evolving threat landscape makes the task of securing your corporate network that much more challenging. What has made the business environment so precarious? Use of wireless networks is rising. More employees are accessing critical information remotely. Social network sites are gaining widespread adoption. Businesses are moving their processes and applications to the cloud. And staying in compliance with PCI, SOX, HIPAA and other regulations is increasingly demanding.

There are ways to respond to these challenges. With Level 3 Professional Security Services, you can help make sure that your network is protected, with the right policies in place to effectively guard against or respond to an attack.

Business Solutions

A Consultative Approach — Drawing upon multiple sources, including security and policy needs of your organization, experience of managing varied, global networks and IT environments and industry best practices, we customize a security plan that's right for your business. Our approach involves:

- Understanding your current security posture and business objectives
- Identifying your critical data and applications and how they are currently secured
- Identifying gaps in your current architecture and policy
- Creating a security strategy with a recommended plan, based on business priority and return on investment (ROI)
- Understanding how Governance, Risk Management and Compliance (GRC) mandates affect your business
- Balancing corporate requirements with the need to secure the network when developing a plan to help you build a comprehensive security policy
- Demonstrating measurable results and value creation

LEVEL 3 SECURITY PROFESSIONAL SERVICES

Our goal is to team with you to help safeguard your data, minimize vulnerabilities and deliver a path for immediate remediation, so you are free to focus on your day-to-day business.

Functions / Technical Capabilities

- **Identifying the Gaps in Your Network Security:** How do you really know if your network is secure? We can help you find out through comprehensive vulnerability assessments and penetration testing.
- **Vulnerability Assessment:** An automated check of your public-facing systems identifies potential gaps in network security. Based on your needs, we'll perform either basic or advanced tests.
- **Penetration Testing:** Expands on vulnerability assessments by attempting to exploit suspected vulnerabilities and gain access to target systems or data. This type of test combines automated and manual testing with attempts to bypass firewalls and intrusion detection systems. Demonstrates a real-world scenario of an attack on the network to which we'll provide a plan for remediation.
- **Building a Security Plan:** Identifying gaps in the network security architecture is only part of the battle. Ongoing, you'll need firm plans around policy, compliance, and incident response.
- **Security Assessment and Audit:** Specifically designed around helping achieve and maintain compliance with most mandates; the result of this engagement is a detailed recommendation to follow in order to achieve this objective.
- **Security Policy Review and Creation:** With core information on the organization's information security policies and procedures, we'll develop a solid documented policy to follow.
- **Wireless Network Assessment:** Performed on the customer's premises as a point-in-time snapshot of the current state of an organization's wireless networks, this comprehensive assessment includes network access point discovery, a full review of rogue access points, untrusted radio signals and traffic, and a review of the segmentation of untrusted networks and traffic.

Why Choose Level 3?

Level 3 has the people, processes and technologies to help you craft a strong security strategy.

We can holistically combine the results of specialized security testing, vulnerability and penetration testing.

Level 3 Professional Security Services combine industry expertise with our global network security capabilities.

Enjoy the simplicity of a single point of contact for meeting your security needs; from monitoring and managing your devices to helping you get through compliance assessments and audits.

Use of wireless networks is rising. More employees are accessing critical information remotely. Social network sites are gaining widespread adoption. Businesses are moving their processes and applications to the cloud. Test your security with Level 3.

ABOUT LEVEL 3

We operate and take end-to-end responsibility for network solutions that connect you to the world. We put customers first and take ownership of reliability and security across our broad portfolio.
